Figure 1: Simulation screenshot for Listing 1.

Make sure the following signals are visible in Figure 1 and the signal values are readable: the program counter in the fetch stage, the instruction being fetched, the content of register x5 and the fields `address`, `rd`, `wr`, `byteena`, and `wrdata` in the `mem_out` signal coming out of the pipeline in the memory stage.

Listing 1: Assembler example without forwarding

```
        addi x5, x0, 0
        nop
        nop
loop:
        addi x5, x5, 1
        nop
        nop
        sw x5, 16(x0)
        jal x0, loop
        nop
        nop
        nop
```
